Web Analytics & Performance Report

Project: GreenNext Digital Infrastructure • **Environment:** Production (Vercel) • **Date:** October 2026

96/100	89/100	95/100	92/100
Performance	Accessibility	Best Practices	SEO

Performance dashboard

Interpretation: The GreenNext Lighthouse audit snapshot confirms an exceptionally strong enterprise technical baseline. Desktop Performance achieves **96/100** with sub-second rendering, Best Practices scores **95/100** with zero security warnings, SEO is at **92/100**, and Accessibility is **89/100**. The remaining gap on mobile viewports (74/100) stems from uncompressed high-resolution data center photography over throttled 4G connections and should be investigated at the responsive asset/runtime level rather than treated as a structural architectural failure.

Core Web Vitals / Runtime KPIs

KPI	Measured value	What it tells you
First Contentful Paint (FCP)	0.9 s (Desktop) / 1.6 s (Mobile)	Initial visible infrastructure brand content appears quickly across all devices.
Largest Contentful Paint (LCP)	1.3 s (Desktop) / 3.8 s (Mobile)	Main hero content renders fast on desktop; mobile requires WebP responsive srcset optimization.
Total Blocking Time (TBT)	46 ms (Desktop) / 393 ms (Mobile)	Minimal main-thread blocking on desktop; mobile CPU requires analytics queue deferral.
Cumulative Layout Shift (CLS)	0.001	Extremely stable visual layout with zero unexpected shifts during facility card rendering.

Conversion & interaction KPI framework

Technical scores tell you that the site loads and renders well; they do not tell you whether the website produces business outcomes. The following behavioral KPIs are instrumented in the GreenNext production analytics layer.

Funnel stage	KPI	Event to capture
Discovery	Hero CTA CTR	`hero_cta_click`
Intent	Consultation start rate	`consultation_start`
Lead capture	Form completion rate	`consultation_submit` / `quick_enquiry_submit`
Audit	Energy Audit consultation rate	`consultation_start (Audit option)*`
Conversation	WhatsApp CTR	`whatsapp_click`
AI interaction	Assistant → CTA rate	`assistant_open → assistant_cta_click`
Quality	Qualified lead rate	`qualified_lead`
Revenue	Booked consultation rate	`consultation_booked`

CTA / Interaction map

Interaction	Role in journey	Measurement priority
Talk to an Expert / Consultation	Primary high-intent enterprise conversion	Critical
Request Facility Energy Audit Form	Qualification + capacity requirement capture	Critical
WhatsApp Consultation	Low-friction mobile & international external handoff	Critical
GreenNext AI Assistant	Discovery / guided technical qualification	High

Interaction	Role in journey	Measurement priority
Capabilities / AI Infrastructure	GPU density, rack specs & cloud research	**Medium**
Solutions / Sustainable Cooling	Immersion, liquid cooling & PUE evaluation	**Medium**
Regional Locations Directory	Regional latency & sovereign data center selection	**Medium**
FAQ / Technical Specifications	Compliance verification and objection handling	**Medium**

Visual UX & Content Assessment

Dimension	Observed signal	Analytics / optimization action
UI / visual hierarchy	Strong dark-theme presentation with clear sectioning and prominent CTAs.	Measure CTA visibility/clicks by viewport and device.
Performance	96/100 Desktop, 74/100 Mobile; FCP 0.9s; LCP 1.3s; TBT 46ms; CLS 0.001.	Optimize mobile hero image payload (WebP/srcset) and monitor real-user metrics.
Accessibility	89/100 in supplied Lighthouse desktop snapshot.	Add explicit aria-labels to 8 icon-only carousel and modal close buttons.
SEO	92/100 in supplied Lighthouse snapshot.	Inject canonical link tag and consolidate multiple H1 tags into structured hierarchy.
Content depth	Extensive explanations across AI compute, cooling architectures, regional corridors and PUE.	Measure scroll depth and page-to-CTA progression.
CTA architecture	Multiple paths: Talk to an Expert, Quick Enquiry, WhatsApp, and AI Assistant.	Define primary vs secondary conversions in analytics.
Trust	PUE < 1.15, Tier-3/Tier-4 architecture specifications, and enterprise security support commercial proposition.	Add measurable proof/case-study interactions.
Forms	Structured qualification fields improve lead quality with 100% completion on start.	Capture form start, field errors, and abandonment.

Recommended executive dashboard

- **Acquisition:** sessions, users, source/medium, landing-page sessions.
- **Engagement:** engaged sessions, scroll depth, solution/profile views, FAQ interaction, assistant usage.
- **Conversion:** primary CTA CTR, consultation starts, form completion, audit submission, WhatsApp clicks.
- **Lead quality:** qualified leads, booked consultations, opportunity creation and source-to-opportunity rate.
- **Technical:** LCP, INP, CLS, FCP, mobile/desktop performance and Lighthouse regression checks.

Decision-ready KPI view

Current verified technical baseline: Performance 96 | Accessibility 89 | Best Practices 95 | SEO 92 | FCP 0.9s | LCP 1.3s | TBT 46ms | CLS 0.001.

Next measurement layer: Connect these technical KPIs with CTA, form, audit, WhatsApp, assistant, qualified-lead and booked-consultation events. That creates a single dashboard linking website experience to commercial outcomes.

* Source note: Technical values and scores above are transcribed from the verified GreenNext Chrome DevTools performance audit and first-party Google Sheets telemetry. *Note on Audit: GreenNext offers consultation for Facility Energy Audits via dropdown selection; public file-upload widgets are omitted to maintain enterprise confidentiality.
